

VERTIS NORTH GARDEN RUN-OFF POND QUEZON CITY, NATIONAL CAPITAL REGION, PHILIPPINES

Slope Protection

Problem

Vertis North is a modern mix-use development in Quezon City. It balances urban and sustainable living in one vibrant location. It consists of 29 hectares and features an eco-efficient development utilizing storm water management technology.

The Vertis North Garden stands as a multi-purpose green and leisure area during the dry season and doubles as a human-made temporary storm water catchment pond during the rainy season.

Solution

MacMat R was used as revetment protection of the human-made catchment pond. Since MacMat R encourages vegetation growth, this solution is ideal for the developer since it also serves the second purpose of the area as a leisure park.

Client: Ayala Land

Designer / Consultant: Makati Development Corporation

Contractor: Makati Development Corporation

Products used (Qty.)

- MacMat R - Steel n/a

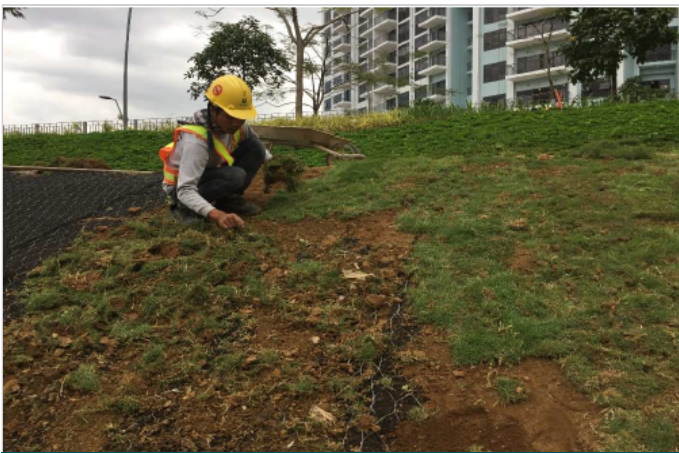

Date of construction: 02/2020 - 03/2020
