

LETTER FROM THE CHAIRMAN AND THE CEO

By Nurturing the World of tomorrow, harmonizing life and nature through innovative solutions, Maccaferri pursues excellence and continuous improvement.

Today, as a consequence of the global growth, most of the world ecosystems are changing at an increased pace and many countries are confronted with climate change, urbanization and resource scarcity.

Water management, soil erosion prevention and people safety are some of the main challenges that societies and communities have to face globally. Indeed, natural and anthropogenic hazards not only adversely affect humans, additionally, impose great burdens upon nations development and taxpayers budgets.

Our experience started in the 1890's when we provided emergency repairs to the banks of Reno river in Bologna damaged by a tremendous flood. Since then our capability has grown and today, we offer a broad range of solutions in hydraulic and geotechnical engineering designed to mitigate hazards caused by natural phenomena and human actions.

By defending lives and natural environment, Maccaferri is affirming its commitment to outstanding safety, quality and sustainability.

We are responsible, respectful and caring not only to the environment but also very much to the people and to the world at large.

Alessandro Maccaferri

Paolo Ramadori

Chairman of the Board

Group CEO
